

## **Comments on Draft Final APs**

---

- **OVERALL**
- **Excellent Work so far**
  
- **... Needing some serious efforts to make yourselves proud**
  
- **Note: I plan to share your work with colleagues so they can appreciate your good progress (with your permission, I will also post some on web)**

## **Main Topics**

---

- **Goal of Project: Analysis of Flexibility**
  
- **Format: Professional**
  
- **Content: Integrated and Coherent**
  
- **Analysis: Decision Tree, Lattice Analysis**
  
- **Citations: Complete**

## **Goal of Application Project**

---

- **Education role of application project is to**
  - Explore use of alternative approaches to valuing flexibility in design
  - To “learn by doing” application in “real life”
  - To form your judgment about relative merits of approaches in your area of work
- **Also, to demonstrate how recognition of uncertainty, and use of flexibility can**  
**INCREASE VALUE OF DESIGN**

## **Format**

---

- **This should be a professional report, directed to audience in your field**
- **It is**
  - not an assembly of the intermediate assignments
  - the final result, shaped coherently, consistently
- **It should have**
  - Statement of issue (to explore flex in your design)
  - Analysis (using alternative processes)
  - Conclusion and Reflections on lessons learned

## Content

---

### Key Elements of Discussion:

- **Recognition of Uncertainty (this justifies the flexibility in and on the system)**
- **Description of Flexibility that could be used after initial design**
- **Strategy for when, under what circumstances you would use flexibility**
- **Discussion of alternative results (by DA and Lattice)**
- **Conclusions**

## Analysis

---

### Explicit Analysis is necessary

- **Descriptions are insufficient, coherent numbers fundamental**
- **Both Decision and Lattice analysis**
- **Up to you to point out advantages, and limitations of each to your situation**
  
- **Mike, Richard-Duane, Reza and I are ready to help you any way we can**

## **Citations, Sources**

---

- **Full citations of data and sources is necessary (as in any professional work)**
- **If you need help in how to do this, you may consult:**  
[http://ardent.mit.edu/thesis\\_manual.pdf](http://ardent.mit.edu/thesis_manual.pdf), pp. 27-30
- **If you “invent” data (OK for purposes of demonstrating analyses) -- indicate clearly that this is what you have done**
